Subject Locking Mechanism for Plan Permission Tool

Description of Problem or Suggestion:

There is a concern that the locking mechanism for the plan permission tool could possibly lock users out permanently.

Originator's Recommendation

Ensure that the design for the locking mechanism has a timeout feature or can be overridden by the EOC to prevent users from being permanently locked out.

Agree. Our design currently allows a user to override the locking mechanism, but there is no timeout feature. By overriding, a timeout feature is not needed. The class FpRmPlanPermManager (p. 5-18, fig. 5.1.2.1.3-1) contains the functionality for removing a user's access to a plan (DeleteAccess function)
